How to connect to wifi

1. Open settings then select the option Wi-Fi once in the Wi-Fi menu below choose a network select other.
2. Once you have selected other, a detail box will pop up and write down these details into their specific boxes.
   Name: QDETA-X
   Security: Select WPA Enterprise
   Username and password: Your username and password.
3. When finished filling in the boxes press the option Join.
4. Once you have pressed Join another box will pop up go ahead and press accept.
5. The previous box will close and under choose a network will be QDETA-X the network you have just joined and you will have a Wi-Fi symbol top left hand corner of your screen.
6. While in this menu select the arrow next to the lock and Wi-Fi symbol in the QDETA-X box.
7. This will bring up the settings for QDETA-X, at the bottom of the screen there will be a menu that says HTTP Proxy and 3 boxes select the box that says manual.
8. Then fill in the following details into their specific boxes.
   Server: proxy2.eq.edu.au
   Port: 80
   Select Authentication ON
   Username and password: Your username and password
9. Once all the boxes have been filled in select the box at the top left that says Wi-Fi Networks it will bring you back to the normal Wi-Fi menu and you will been connected to the network.
10. When finished you will have the Wi-Fi symbol in the top left hand corner of your screen and free to use Wi-Fi.
